

Windows command in the command prompt

- Reference: [Command-line reference A-Z](#)

[Windows Key], then type **cmd**

- Open up a command prompt
- Another way to do it for you lab is to run the Windows App **Git CMD**

cd [directory]

- change directory

Example: **cd Desktop** -- change to a sub-directory called "Desktop"

cd .. -- change from the current working directory to the directory one level above

md [directory]

- create a new sub-directory

Example: **md lab1** -- create a new sub-directory lab1 under the current working directory

rd [directory]

- remove an existing sub-directory

Example: **rd lab1** -- before you can remove a directory, it needs to be empty. Otherwise, the remove action will fail.

dir or **dir/w**

- list the content of the current working directory
